**CASAssure is a tool for managing and disseminating alerts to ensure that your organisation is up to date and compliant with alerts, safety critical information and guidance. Compliance with the alerts is vital to ensure patients, staff and visitors are safeguarded from harm.**

CAS alerts are automatically added to CASAssure by Allocate Software, allowing the quick and easy dissemination of CAS alerts to relevant parties across your organisation, with simple online tools allowing the recording, monitoring, and reporting of responses and actions.

CASAssure provides an internal monitoring system to give assurance to senior managers and the Board that alerts are being responded to in a timely manner, and that ensuing actions are being tracked.

The system allows for storage of evidence and keeps the alerts all in one place, it can be made accessible by all managers across the Trust, and gives access to all alerts if desired.

CASAssure can be used centrally by the Trust's CAS lead, or for the system to automatically distribute alerts to various clinical leads across the Trust, allowing them to respond to the alert via a simple update screen.

Visually engaging reports and dashboards are available to show the progress against the alert's actions, and these can be automatically emailed to key stakeholders on a pre-set schedule - this is another

time saver and ensures that real time information is regularly communicated. These dashboards and reports make it easy to see at a glance which alerts are still open and therefore need to be followed up with the owner.

#### **Proven benefits:**

*"The CAS Module has been a great asset to me. It saves on average 10-15 mins per alert ... it makes reports easier as well as I am able to extract the information I need and download the report thus saving hours of report writing."*

Chris Sawyer , Health & Safety Manager at Kettering General Hospital NHS Foundation Trust
